

## **BZ & Sons Sweeping & Washing, Inc.**

**...provides services that keep our customers current with the latest environmental regulations.**

---

### **BZ & Sons is 'BMP Knowledgable:'**

#### **Industry-Leading Methods, Training and Procedures**

Clean Water Act, Clean Air Act, Best Management Practices, Total Suspended Solids (TSS), Phase I, Phase II: The management team at BZ & Sons prides itself in staying up-to-date on the latest in 'regulatory speak.'

We stay familiar with agency regulations and are constantly re-educating ourselves about the latest information on environmental topics. Our customers reap the benefit of our expertise.

- Our mandate to our customers is to keep you on track with the latest Best Management Practices regarding what sweeping can do for stormwater runoff pollution abatement and mitigation.
- We emphasize ongoing management education and training to keep up with the latest local, state and federal regulatory information.
- We are committed to being leaders in the industry as a top echelon sweeping company, always at the forefront of industry methodology, equipment and information.

#### **Experienced, Trained Operators for an Outstanding Level of Service**

Our municipal and construction sweeper operators have many years of experience and are highly trained at the type of sweeping they will be doing for you. Further, they will arrive on your jobsite as scheduled and be in a well-maintained sweeper designed for the work at hand. We understand that sweeping is an integral part of an overall operation, and take every precaution available to ensure we are *never* the 'weak link' on the job.

- Employees of BZ & Sons are motivated to perform at a high level.
- Our ongoing professional training programs enable us to offer the most thorough and reliable service procedures available.
- Our employees are proud of their company and their work. You'll see this enthusiasm reflected in their attitudes and quality of work.

#### **We Have a Well-Maintained, Late Model Sweeper Fleet**

- We offer heavy-duty air sweepers, as well as broom-assist air sweepers, to our municipal and construction sweeping customers. This ensures you'll always have the right sweeper on the job, unlike smaller, less professional companies that are forced to send whatever sweeper they happen to own onto a jobsite.
- We have the capability of maintaining dust suppression even in sub-freezing weather, which means we can stay on the job when other companies have their fleet parked.
- Because of the extensive size of our fleet, we are able to maintain a backup sweeper, available by radio, for immediate service in the event of a breakdown.

***"Going the extra mile with service and quality since 1986"***
